PM backlog is defined as the count of PM work orders that are greater than 30 days past their target start date. For Q3, the Contract College and Endowed zones show an overall decrease, though that trend is reversing in the last month, which is typical for this time of year. The SAS zone was fairly steady, though it is also showing an upturn as the quarter ends. Spikes at the end of the quarter are due to monthly PM work anomalies.
PM backlog is defined as the count of PM work orders that are greater than 30 days past their target start date. All 3 zones are beginning to show an upward trend, which mirrors this period last year. Spikes at the end of March are due to monthly PM work anomalies.
