Project Manager: Melissa Baldassarre  
Architect: TBD  
Project Size: 19K GSF  
Location: 134 Hollister Drive

Project Description:  
Fully renovate research space in Kimball 2nd, 3rd, and 4th floors for near term use by new faculty hires in Biomedical Engineering (BME), Mechanical and Aerospace Engineering (MAE), Material Science and Engineering (MSE), and Electrical and Computer Engineering (ECE), who need wet labs. As other space is developed as a more permanent location for the BME faculty, these labs will allow longer term wet lab and hybrid lab expansion space for other departments. This project also includes improvements to Thurston, Rhodes, and Upson to provide swing space for current occupants of Kimball.

Project Status:  
Responses to the Request for Proposal for architectural services were received in early January. The architect selection phase is currently underway with an award of a design contract expected in February.
