

Cornell University Facilities Services

University Health Services Facility (UHSF)

Project Manager: John Keefe
Architect: Chiang O'Brien Architects
Project Size: 66,000 GSF (new) 30,000 GSF (renov)
Cost per GSF: TBD
Location: 110 Hoy Plaza

Project Description:

The purpose of this project is to support student health at Cornell University, which has reached a critical moment in its evolution. In recognition of the centrality of health to the lives of individuals and to the learning mission of the University, student health has been identified as a priority in the new strategic plan. President Skorton has provided a leadership voice, urging students to ask for help and calling on University Health Services to “continue its pioneering work in preventive, diagnostic, and therapeutic services with the focus on identifying and reaching those at risk, in collaboration with faculty, staff, and students across campus.”

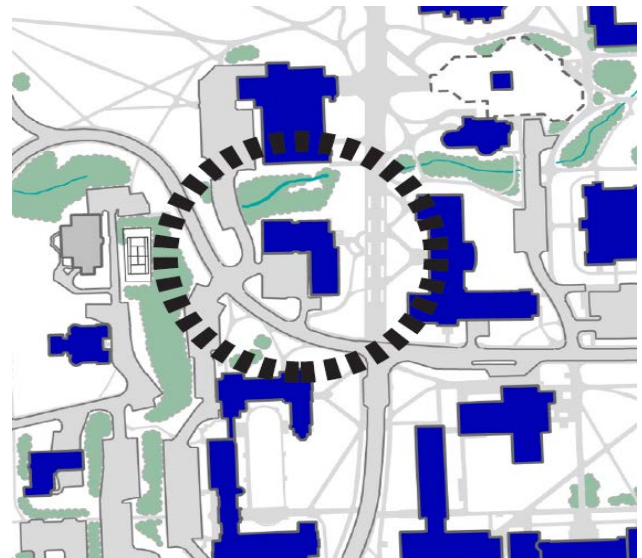

The need for a renovated and expanded UHS facility is driven by today’s demand, with university enrollment (increased by over 30% since the addition to the facility in 1979) as the primary driver.

Project Status:

The programming phase of the project is complete and design was started in April. The design team is currently working on the development of three options for evaluation. The current plan is to decide on an option in July and then develop that option through Schematic Design.
